SUMMARY

Full-Stack Developer specializing in modern web architectures with Next.js and FastAPI. Experienced in building scalable, multi-tenant B2B SaaS platforms and managing deployments via Docker and Google Cloud Platform (GCP). Passionate about solving complex architectural challenges—from optimizing real-time canvas synchronization to engineering robust backend infrastructures. I thrive in autonomous, fast-paced environments where I can take ownership of hard problems and deliver high-impact, production-ready solutions.

EDUCATION

Istanbul University, Associate Degree in Web Design and Coding

2025 – Present | Istanbul, Türkiye

SKILLS

Frontend Development (Next.js | React | TypeScript | Zustand | Tailwind CSS)

Backend & Core (FastAPI | Python | PostgreSQL | Redis | WebSockets | Yjs)

Cloud & DevOps (Docker | Kubernetes | AWS | GCP | CI/CD | Git | Supabase | Sentry)

LANGUAGES

Turkish | English

PROJECTS

B2B SaaS Engine - WORKSPACE OS, Next.js, FastAPI, Supabase, Docker, GCP 05/2026 – Present

- Engineered a scalable multi-tenant B2B SaaS architecture using Next.js and FastAPI, integrating Supabase for secure authentication and PostgreSQL for robust data management.
- Architected a highly optimized canvas template engine, solving severe performance bottlenecks. Enabled complex UI states to be dynamically rendered, converted, and managed without causing main-thread blocking or UI lag.
- Containerized the entire application stack with Docker and automated CI/CD pipelines via GitHub Actions, establishing a reliable and fast cloud deployment workflow.
